OpenLibrary is a not for profit and an open source website that allows to get access to obsolete books from the internet archive and even get information on nearly any book that has been written. It is sort of a Wikipedia that will at least provide you with references related to the book you are looking for like, where you can get the book online or offline, even if it doesn't store itself. Therefore, if you know a book that's not listed you can simply add the information on the site.

Dynamics Of The Standard Model

This book devotes a lot of attention to aspects of the standard model that require an understanding of its dynamics and not merely its symmetries. These issues are very important for researchers, and the book is destined to become both a valuablereference for them and a text that can be used in advanced courses in particle physics.*

Dynamics of the Standard Model ()

The Standard Model of particle physics is the theory describing three of the four known fundamental forces in the universe, as well as classifying all known elementary particles. It was developed in stages throughout the latter half of the 20th century, through the work of many scientists around the world, with the current formulation being finalized in the mid-1970s upon experimental confirmation of the existence of quarks. Since then, confirmation of the top quark, the tau neutrino, and the Hi

Standard Model - Wikipedia

The Standard Model of Particle Physics account for field interactions. In a perturbative regime, the amplitude of any physical process can be expressed as an expansion inLIntrepresented (at a given order) by a set of Feynman diagrams.

The dynamics of an epidemic, for example, the flu, are often much faster than the dynamics of birth and death, therefore, birth and death are often omitted in simple compartmental models.The SIR system without so-called vital dynamics (birth and death, sometimes called demography) described above can be expressed by the following set of ordinary differential equations:

To set up standard costs, follow these steps. 1. Create an item model group for standard costs. Use the Item model groups page to create a new group for standard costs, and assign an inventory model of Standard cost. The identifier for the item model group should be meaningful, such as Std Cost. Select the check boxes to indicate that the group ...
