physical interfaces to cause packet delivery. If a dialer interface engages in a multilink session, a dialer interface is in control of a virtual access interface, which in turn controls S0:3 or chassis 2 S0:3, for example. A dialer interface is created with the interface dialer global configuration command.

Listing 1, a controller is just a class (a Visual Basic .NET or C# class). A controller is a class that derives from the base System.Web.Mvc.Controller class. Because a controller inherits from this base class, a controller inherits several useful methods for free (We discuss these methods in a moment).

Your controller methods should contain only a few lines of code. If a controller action gets too fat, then you should consider moving the logic out to a new class in the Models folder.

Summary. This tutorial provided you with a high level overview of the different parts of an ASP.NET MVC web application.
